

Cyber research capabilities

Our team provides the widest scope of cyber research capabilities, the team are veterans from the elite IDF cyber security units and the Mossad.

Government and official institutes, such as government's offices, Banks, Oil companies, Electric companies, etc.. are seeking to digitize their services but should be aware of the risks involved.

By providing in-depth information about the relevant cyber environment, we support our clients and expand them with the security parameter that protects their data and assets by using cloud services taking flight.

With our updated intelligence, we are able to help our clients to be prepared for any kind of Cyber-attack, as they learn what they can expect when a security breach or malicious attack occurs. We also provide preliminary operations, which can help our clients, predict and even prevent attacks.

Once our clients understand the threats they are exposed to, we are doing the installing of new systems to investigating cybercrimes, everyone must be ready to face down any challenges or eruptive technologies.

Our research allows us to predict cause of a crisis. Based on elaborate information, we are able to create strategies to avoid it or plans to mitigate it if it occurs.

We support our clients in taking a pro-active prevention policy towards risks.

Understanding the client's opponent is a key element when building a strategy for a complex situation. We support litigation processes by identifying the client opponents' vulnerabilities, interests, priorities and strategy. Using our unique intelligence methodology, we enhances its clients' decision-making by providing otherwise unobtainable information. We help our clients identify their adversaries' sensitive points or vulnerabilities, or evidence of their misconduct.

Based on our experience of fraud investigation and analyzing complex, include offshore, company structures, we identify instances of criminality in our clients' counterparties' operations, such as different kind of fraud, involvement with organized crime or sanctions violations.

The ability to obtain timely, relevant information, and to draw the correct conclusions from its analysis, is essential for different aspects of potential threats development and performance, such as keeping track with main competitors.

We specialize in gathering and analyzing intelligence that enables our clients to better understand their operating environment, enhance their ability to identify risks and leverage their cyber edge. Our competitive intelligence service is based on cutting-edge methodology that includes high-end information gathering and research capabilities, bolstered by solid technical.

We identify potential threats, locate key players and centers of activities, and create detailed target profiles that assist our clients in executing well-informed moves.

Decisions involving significant moves and expanding operations into foreign countries inevitably involve risks and benefits, our Deep-Level Due Diligence service supports clients' risk management and helps minimize such risks by providing comprehensive assessments of the targets by delves into the target, their motives and interests, past behavior in other roles and any other information that could reveal behavior contrary to the strategy of our clients.

What is our services include ?

- Monitoring potential threats.
- We look into how potential risks can be avoided,
- Penetration tests and security check.
- Advance cyber research.
- Data leakage and cyber forensics.
- We support our clients by training their employees.
- Internal investigations and penetration tests.
- Forensic and fraud research.
- International and multi-national litigation support.
- Customized challenge resolution strategies.

We believe that the best strategy is when a wide scope of possible events are considered in advance and being treated before they happen.
